**Heterogeneous chemistry of solid/vapor and liquid/vapor interfaces
investigated under environmental conditions**

am

Dienstag, 27. Mai 2014, um 16:00

Abstract:

The interaction of gases with surfaces plays a major role in many processes in the environment, heterogeneous catalysis, and technology. Ambient pressure photoelectron spectroscopy is an excellent method for the investigation of the interfacial chemistry of solid/vapor and liquid/vapor interfaces under reaction conditions at pressures of several Torr. Recent developments in the technique now also allow to access liquid/solid interfaces. This talk will discuss the reaction of water vapor with oxide surfaces, the correlation between electrical potentials and surface chemistry in model solid oxide fuel cells, as well as the influence of the presence of adsorbates on the premelting of ice.
